

(((Do more with your Internet)))

Airspot introduces a revolutionary Wireless router that doesn't only help you stay connected, but also form a collaborative community hotspot with social networking features built into it. So, what can you do with it?

- Share Your Internet
- Earn More Money
- Free WiFi Roaming
- Let Your WiFi Go Social

How does it work?

When you connect the Airspot router to your existing Internet connection, it starts transmitting 2 WiFi Signals (SSIDs).

1. The first signal (named "Airspot-Private") is WPA2-PSK encrypted and is meant for the Airspot Owner's use.
2. The second SSID is meant for public use, and is aptly named as "Airspot-Public". This converts your location into a public WiFi hotspot (we call it Airspot).

It is this network that can be used by your visitors to purchase Internet access, for a minimal fee.

The Airspot Advantage

- **Bandwidth Sharing** - The idea is to share your extra, unused bandwidth with the general public, and convert your location into a public hotspot.
- **Get Paid** - You earn 50% of the revenue for every purchase of Internet Access by a visitor at your Airspot location.
- **Free Roaming for the Host** - As our appreciation towards the ones who decide to share their bandwidth with the world, Airspot allows its Hosts to roam (access the Internet) freely at other Airspot locations, all over the country.
- **802.11n standards compliant** - We are offering a 802.11n standards compliant router that has a better coverage area and faster data transfer speeds.

Features & Functionalities

- **Government Recommendations Compliant** - Airspot keeps a log of all the websites that are accessed by the Guest and the Visitor, keeping compliance with the Indians Government's latest recommendations. We do it, so that you can sleep in peace.
- **WPA2-Personal Security** - Airspot's networks are secured with the strongest pass phrases, using the 128-bit WPA2-PSK security protocol, which is the best in the business.
- **3-D Secure Online Payment Gateway** - Airspot uses a safe and 3-D Secure Online Payment Gateway, that's fully compliant with industry's security standards, to help you purchase Airspot Passes online.
- **Showcase Your Airspot** - We shall soon be launching a Maps section where we shall be listing out all the Airspot networks around the country that shall be live, at any given moment.

Share your Bandwidth

- Allow visitors to “pay & access” your public network
- Allow your guests to access the Internet for free

Build your own Social Profile

- Social networking opportunities
- Connect with the Airspot community

Earn Money

- Now, do more with your Internet
- 50% of every sale belong to you

802.11B/G/N

airspot

WiFi Goes Social

- We have also come up with the idea of creating social profiles of the Airspot Hosts, that shall open up a lot of new avenues.
- **Social Networking** - We provide you with the opportunity of networking with not just other Hosts in the country, but also with the Visitors who use their Airspot networks.
- **Exchange of Ideas** - Networking with other Hosts means you can discuss the usage stats and sales on other regions too, in turn tweaking the way you provide the service on your location. What more, you can also converse with your visitors and attend to their grievances.
- **Community Support** - One of the major outcome of Social Networking, especially in a particular niche, is that you can always get your answers much quicker from a fellow user, than from the companies. Yes, that includes us too.
- **Aggregated Social Profile** - Every single social network that you are a part of, every single blog that you write, can be neatly listed out on Airspot's Social Profile. So now, you have only one URL to share, if you want others to get connected to you.

Looking For More?

- It takes only 5 minutes to set up
- Use the same credentials to access any Airspot network in India
- Setup Guest accounts for your friends and family, and let them access Internet at your Airspot for free
- Wireless Access to other devices like printers and webcams
- Extra performance boost when connected to Wireless-N devices
- Surf, email, stream music, play on-line games, and make Internet phone calls.
- HD Videos and lag free network gaming
